

Honeywell eZtrend QXe

Honeywell's eZtrend is a cost-effective, general purpose DIN size electronic data recorder that easily replaces 100 mm paper strip chart recorders, providing the ability to capture continuous and batch data electronically. Data is recorded in a secure digital format, eliminating interpolation errors that can arise from transposing data from a chart to a spreadsheet for analysis.

Honeywell SX Recorder

The Multitrend paperless recorder reliably records electronic data in a secure format from directly connected sensors or transmitters that can be used for documentation of the process conditions and process improvement. Its large 12.1" diagonal high-resolution display provides the best solution for viewing process data from a distance, while the 48 analog input capabilities provide the means to monitor all critical and most secondary parameters in a given process.
